***DETAILED ACTION***

- Response to the applicant's amendment dated 12/8/2009
- Claims 1-10 have been Cancelled
- Amended claims 11-16 have been submitted for examination
- Amended claims 11-16 have been allowed

***Response to Arguments***

1. Applicant's arguments see pages 6-9 filed on 12/8/2009, with respect to claims 11 and 15 have been fully considered and are persuasive. The rejections of claims 11 and 15 under section 35 USC 102(e) have been withdrawn.

***Allowable Subject Matter***

2. Claims 11-16 are allowed.

***REASONS FOR ALLOWANCE***

The following is an examiner's statement of reasons for allowance:

3. The independent claims 11, 12, 15 and 16 of the present application teach for example (as per claim 11):

An input control apparatus comprising:

a receiving section that receives a signal including bits of a systematic part and bits of parity parts comprising a plurality of sequences, the signal being

Art Unit: 2112

generated in an external transmission apparatus by turbo coding and puncturing information;

a rate dematching processing section that performs rate dematching processing on the received signal; and

a bit number reduction section that discards bits from the systematic part and bits from the parity parts so that the number of bits in each sequence of the parity parts is less than the number of bits in the systematic part, at a timing between the rate dematching processing and turbo decoding on the signal subjected to the rate dematching processing.

**The foregoing limitations are not found in the prior art of record.**

**Particularly, none of the prior arts of record teach nor fairly suggest the emphasized limitation as cited in the independent claim 11 that comprise:**

An input control apparatus comprising:

a receiving section that receives a signal including bits of a systematic part and bits of parity parts comprising a plurality of sequences, the signal being generated in an external transmission apparatus by turbo coding and puncturing information;

a rate dematching processing section that performs rate dematching processing on the received signal; and

Art Unit: 2112

a bit number reduction section that **discards bits from the systematic part and bits from the parity parts so that the number of bits in each sequence of the parity parts is less than the number of bits in the systematic part, at a timing between the rate dematching processing and turbo decoding on the signal subjected to the rate dematching processing.**

4. Claims 13 and 14 depend from claim 12.
5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
